

Joint author statement

If a thesis contains articles (i.e. published journal and conference articles, unpublished manuscripts, chapters etc.) made in collaboration with other researchers, a joint-author statement verifying the PhD student's contribution to each article should be made by all authors. However, if an article has more than three authors the statement may be signed by a representative sample, cf. article 12, section 4 and 5 of the Ministerial Order No. 1039 27 August 2013 about the PhD degree. We refer to the Vancouver protocol's definition of authorship.

A representative sample of authors is comprised of

- Corresponding author and/or principal/first author (defined by the PhD student), and if there are more authors:
- 1-2 authors (preferably international/non-supervisor authors)

Titel of the article	<u>The role of citric acid in oral peptide and protein formulations: relationship between calcium chelation and proteolysis inhibition</u>
Author(s)	<u>SH Welling, F Hubálek, J Jacobsen, DJ Brayden, UL Rahbek, ST Buckley</u>
Journal/conference * if applicable	<u>European Journal of Pharmaceutics and Biopharmaceutics 86 (3), 544-551</u>
Name of PhD student	<u>Søren Havelund Welling</u>
Date of Birth	<u>23rd of May 1986</u>

Description of the PhD student's contribution to the abovementioned article

Main author. Performed the various experiments under super vision of co-authors.
Performed all claculations. Performed all illustrations.
Produced first draft for article.
